- **Available in black and silver**

### IN DETAIL ● ● ●

Part of our new Designer PC range, the mini PC is a practical alternative to the large, and full sized tower or desktop computer. Despite its size the Designer Mini PC has many of the features you would expect to find on even a highly specified full sized PC.

Its designer looks and compact size means that it is not only ideal for a modern working environment but that it is equally suited for use in the home, where perhaps looks and tidiness are the most important factor.

It's Powerful Intel Pentium 4 processor and DDR memory means that you are not sacrificing performance for it's style or size and by sharing the same standard major components as you would find in a full sized PC, you will find upgrading the spacewalker mini PC in the future as painless as upgrading any other computer.

This is a computer that is designed around the requirements of the user and this shows in every feature, from the easily located front facing USB ports, to the rapid start up time of less than a minute from cold to ready to use. Also including two drive bays, allowing expansion for extra hard disks or CD-ROM/DVD drives.

***We recommend this unit as the ultimate combination of practicality and design.***
