- **Fully adaptable to you business**

IN DETAIL ● ● ●

We all know how frustrating, as well as offensive and potential dangerous, it can be receiving unwanted Spam or Junk email. For modern businesses spam protection should be a vital component of a network's security.

The constant fight against Spam mail is often a time consuming exercise, but with Conquest Wildman installing a GFI Mail Essentials package on your MS Exchange Server it eliminates the need to install and update anti-spam software on each desktop, as is the case with other anti spam software. Using sophisticated Bayesian analysis, a high Spam detection rate does as much as someone could sensibly ask an employer to do to stop offensive content getting through the company email system to their users desktop, whilst allowing wanted emails through the net.

Mail Essentials also adds email management tools to your mail server: disclaimers, mail archiving and monitoring, Internet mail reporting, list server, server-based auto replies and POP3 downloading, therefore making it fully tailorable to your business.

Protect your employees and business from dangerous and offensive Spam mail with an MS Exchange Anti Spam system supplied by Conquest Wildman.
