

### Win the war on Spam with a Conquest Wildman Junk Mail Solution.

- *Stop spam at its source! More than a filter, our solution can reduce the amount of spam sent to you in the first place.*
- *Very low cost initial purchase plus no ongoing subscription fee's*
- *Very simple and quick to use, almost no user interaction to reduce junk mail*
- *Integrates into Outlook or Outlook Express*
- *Intelligent learning of what's spam and what's not*
- *Use information from a central spam intelligence database to detect and delete spam*
- *Optionally allow your antispam software to feed back with information about your spam mail, so others can benefit from your intelligence.*
- *Have known spam automatically "bounced back" as undeliverable*
- *Safely remove yourself from known emailing lists*
- *Prevent bugs in spam from reporting back to their sender*

### IN DETAIL ● ● ●

Conquest Wildman have put together a solution of measures to address the increasingly frustrating and potentially serious problem of Junk Mail. Our solution will rate the likelihood of each incoming mail being junk by analysing the emails subject, contents, senders address and other static information. Over a period of time it will learn your preferences by monitoring your email and it's self learning filters will adapt accordingly to ensure that it remains effective in combating not only current junk email but new batches too.

Where our solution rises above the competition is it's ability to pass on the knowledge gained in combating spam to the Global Response Spam Learning Network, an automated intelligent learning network. The knowledge gained is then used to update your antispam software regularly ensuring that it achieves results close to 100% accuracy in detecting junk. This helps fight the growth of spam by automatically analysing junk email and it's routing information, to notify any Email and ISP administrators whose email servers or networks were abused by the sender. If it gains sufficient information then it will also notify relevant spam abuse organizations that actively track and prosecute illegal and offensive email activity.

Simple to use, it operates in the background with little or no interaction from the user. It integrates seamlessly with Microsoft Outlook, Outlook Express and other mail retrieval applications. It also works extremely well with both Norton Antivirus and Norton Antivirus Corporate edition, to not only prevent junk mail, but to also protect you against email based computer viruses.

The Conquest Wildman Junk Mail Solution works to reduce the amount of spam that is actually sent to your address in the first place, by working intelligently and externally, with other organisations to prevent your email address getting onto rogue mailing lists in the first place. If you are receiving emails from reputable organisations that you no longer wish to receive, our solution will automatically and safely remove you from these lists without fear of being targeted by more junk email. Because of its enormous learning network, the software automatically knows which lists are safe to unsubscribe from and which are not. To remove your name from other, non reputable mailing lists, the software will send an undeliverable bounce message back to the sending system, to indicate that your email address is either invalid, or no longer exists. Over time this can lead to your address being removed from many mailing lists.

*The Conquest Wildman Junk Mail Solution works on almost all operating systems and mail servers to combat the hassle of junk mail to your business.*
