

*As an alternative to the multimedia, space-saving 15" TFT, both our spacewalker packages are also available with a standard 17" or 19" CRT Monitor*

*An affordable PC package that's small and tidy without compromising performance or upgradeability*

- **Space saving design**
- **Ultra quiet operation**
- **TFT flat screen display**
- **Optical cordless mouse**
- **Enhanced USB keyboard**

## IN DETAIL ● ● ●

The Conquest Wildman Spacewalker Mini PC is a practical alternative to the larger full sized tower or desktop computer. Combined with our multimedia flat panel TFT screen, the Spacewalker Mini PC package makes an ideal solution where, in addition to performance and reliability, looks and tidiness are also important.

The enhanced Logitech USB keyboard, with optical cordless mouse, and the inbuilt stereo speakers inside the TFT screen, are just three of the ways in which this system minimizes messy cabling and clutter on the desk.

This is a computer system designed around the requirements of the user and this shows with features such as the easily located front facing USB ports, the rapid start up time. The accurate and reliable Logitech optical cordless mouse makes navigating the internet a breeze and cleaning dirty mouse balls a thing of the past!

The powerful Pentium 4 processor and DDR memory means that you are not sacrificing performance for style or size, and by sharing the same standard major components as you would find in a full sized PC, you will find upgrading the Spacewalker in the future just as easy.

*The Conquest Wildman Spacewalker Package is everything you'd expect in a home or office computer, and more...*
